SUGGESTED CITATION

T. Roxey, ed., *FD — Foundational Definitions, September 2026 Edition*, Eclectic Technologies, September 2026. <https://doi.org/10.5281/zenodo.23000686>

Cite this edition: <https://doi.org/10.5281/zenodo.23000686>. Cite the family as it currently stands, across all editions: <https://doi.org/10.5281/zenodo.22181028>. The August 2026 Edition remains citable at <https://doi.org/10.5281/zenodo.22181029> for what it contains.

1. What this edition is

The Foundational Definitions are the instruments that own the concepts the rest of the corpus applies. A sector framework, a facility-class design basis, a vendor companion or an application guide uses the Bright Line, the Broker, the envelope, the determinism boundary and local sovereignty. It does not define them. This family does.

A concept belongs in this family when the correctness of other documents depends on agreeing what kind of thing it is. A concept with a settled external meaning, on which no document's correctness turns, does not belong here however important it is.

This is the family's second edition. It supersedes the August 2026 Edition as the current statement of the family, and it does not withdraw it. The August edition remains a correct statement of what the family held in August.

2. Contents

Designation	Title	Version	Class
FD-BL	The Bright Line	0.4	Foundational Definition
FD-LD	Layer Decomposition and Determinism	0.3	Foundational Definition
FD-EV	The Envelope	0.1	Foundational Definition
FD-BR	The Broker	0.10	Foundational Definition
FD-BL-D1	Mode of Discharge: Pre-Authorization by	0.4	Determination under FD-BL

	Verified Gatekeeper		
FD-BL-D2	Indication Integrity: Trustworthy Basis for Authorization	0.3	Determination under FD-BL
FD-LS	Local Sovereignty	0.5	Foundational Definition
FD-REG	The Governing Stack Register	0.21	Companion register (dated copy)

Determinations are not Foundational Definitions. They settle a question the governing definition left open, under its authority, and are cited alongside it.

FD-LS appears in an edition for the first time. The construct was originated by Project 5 of this portfolio, Grid Operations and Energy Policy, which holds it. The instrument here is its definition of record, kept with the rest of the family because that is where the corpus holds what every project inherits. Its own §2.3 states the origination and the lineage.

FD-REG is included as a companion and not as a member. It is the register that holds the version state of the family, and the bare citation form used throughout the corpus (FD-BL §4.2, without a version) resolves against it. The August edition did not carry it, so a reader following a bare citation had nothing to resolve it against. The copy here is dated 27 September 2026. After that date its master governs.

3. What changed since the August 2026 Edition

FD-BL moves from 0.3 to 0.4. Its §4.5 no longer describes advance discharge as a determination in progress, which it had been since August even though its own §6.1 recorded the question as resolved. It states the Command Broker's substitutability value and unit of authorization by pointer to FD-BL-D1, and it cites FD-BR as the source of the Broker role-type. Placement, granularity, scope and the obligation are unchanged.

FD-LD moves from 0.1 to 0.3. It restores material the first promotion dropped from its source annex, and its rendered form now sets its concordance as a table and its governing carve-out statement as a quotation, which the August render did not. FD-BL §4.4 inherits that carve-out statement.

FD-BR moves from 0.1 to 0.10, the largest change in the edition. The Influence Broker's non-substitutability is now grounded on FD-BR's own proof-bounded rule, measured against FD-BL-D1 R2, and stated on present understanding rather than in principle. The detectability ground the August edition carried is withdrawn. The unit on which a Broker's judgment is exercised is now set by each Line document and bound by reference. All of FD-BR's author decisions are closed, including the confirmation that substitutability is a rule in FD-BR and a value in each Line document.

FD-BL-D1 moves from 0.3 to 0.4 and FD-BL-D2 from 0.2 to 0.3. Both conform their citation form to the register. FD-EV is unchanged at 0.1.

4. Precedence and propagation

Foundational Definitions take precedence over sector frameworks, facility-class documents, application guides, vendor companions, annexes, qualification standards and implementation guidance. A

restatement may be expressed in sector vocabulary and may apply a definition to sector-specific actions. It shall not vary the placement criterion, the granularity, the scope of application or the obligation.

Propagation is by reference to the owning instrument, not by restating its text. An instrument that rebroadcasts its own wording re-introduces variance at every revision cycle.

5. What this edition asserts, and what it does not

An edition is a coherence claim, not merely a package. This edition's claim is narrower than the August edition's, and the difference is stated here rather than left to be discovered.

It asserts that the seven instruments in §2, at the versions listed there, were read against one another on 27 September 2026. Every cross-reference between them to a numbered section resolves to a section that exists in the version cited. The surveillance branch's revision of 26 September was also read, and the conformance it asked of FD-BR is complete.

It does not assert that the corpus applying these instruments has been conformed to them as of this date. The August edition's claim rested on a corpus-wide reconciliation. No such reconciliation was run for this edition. Under the tier rule, conformance of the sector and application instruments is staged at each instrument's own next revision, and some are behind. Where a sector document's statement of one of these constructs differs from the instrument here, the sector document is a restatement and the instrument here governs.

Coherence decays, and it decays fastest in the newest work. The edition date is the honest boundary of the claim.

6. Not in this edition

The surveillance branch is not in this edition. That is FD-SBL, the Surveillance Bright Line, with its determinations FD-SBL-D1 and FD-SBL-D2 and its register FD-SBL-REG. The branch belongs to Project 1 of this portfolio. It was revised on 26 September 2026 and is held from release pending external review. FD-BR's references to FD-SBL are cross-references to that branch. They are not satisfied within this edition, and they will be when the branch is published.

Sector instantiation is not here by design. FD-BL-D1 §7 and FD-BL-D2 §7 are sector-neutral and delegate instantiation to sector annexes, which are separate instruments and are not part of this family.

7. How to cite

Cite the concept DOI for the definitions as they currently stand, and the version DOI to pin this edition. Within a citation, name the instrument and section: FD-BL §4.2, in *FD — Foundational Definitions, September 2026 Edition*. The instrument's own version number is printed on its cover and in its citation block, and FD-REG holds it.

8. Revision policy

Instruments revise on their own schedules and carry their own version numbers. A change to any instrument does not by itself publish a new edition. An edition is cut when the author judges that the family has moved enough to warrant a new coherence claim, and each edition is published as a new

version under the same concept DOI. The editions therefore record which combinations of versions were coherent together. That is the property a corpus built on propagation by reference most needs and most easily loses.
