SUGGESTED CITATION

T. Roxey, ed., *FD — Foundational Definitions, August 2026 Edition*, Eclectic Technologies, August 2026.

Cite this edition: <https://doi.org/10.5281/zenodo.22181029> — FD — Foundational Definitions, August 2026 Edition. A concept DOI covering all editions is assigned when this edition is published and appears in the next edition's citation block.

1. What this edition is

The Foundational Definitions are the instruments that own the concepts the rest of the corpus applies. A sector framework, a facility-class design basis, a vendor companion, or an application guide *uses* the Bright Line, the Broker, the envelope, the determinism boundary. It does not define them. This family does.

A concept belongs in this family when the correctness of other documents depends on agreeing what kind of thing it is. A concept with a settled external meaning, on which no document's correctness turns, does not belong here however important it is.

2. Contents

Designation	Title	Version	Class
FD-BL	The Bright Line	0.3	Foundational Definition
FD-LD	Layer Decomposition and Determinism	0.1	Foundational Definition
FD-EV	The Envelope	0.1	Foundational Definition
FD-BR	The Broker	0.1	Foundational Definition
FD-BL-D1	Mode of Discharge: Pre-Authorization by Verified Gatekeeper	0.3	Determination under FD-BL
FD-BL-D2	Indication Integrity: Trustworthy Basis for Authorization	0.2	Determination under FD-BL

Determinations are not Foundational Definitions. They settle a question the governing definition left open, under its authority, and are cited alongside it.

3. Precedence and propagation

Foundational Definitions take precedence over sector frameworks, facility-class documents, application guides, vendor companions, annexes, qualification standards, and implementation guidance. A restatement may be expressed in sector vocabulary and may apply a definition to sector-specific actions; it shall not vary the placement criterion, the granularity, the scope of application, or the obligation.

Propagation is **by reference** to the owning instrument, not by restating its text. An instrument that rebroadcasts its own wording re-introduces variance at every revision cycle.

4. What an edition asserts

An edition is a coherence claim, not merely a package. It asserts that the instruments listed in §2, at the versions listed there, were reconciled against one another as of the edition date, and that the corpus applying them had been conformed to them as of that date.

For this edition, that claim rests on a documented reconciliation: a corpus sweep classifying every instrument that states, applies, or references the Bright Line; five conformance passes across those classes; and a completeness audit closing the punch-list. The last pass, in August 2026, brought the water-sector build-out inside the reconciliation, corrected two formulations that varied from FD-BL, and reserved the term “Bright Line” where a sector document had used it in an unrelated sense.

Coherence decays. It decays fastest in the newest work, because new documents are drafted from whatever lineage the author had open. The edition date is the honest boundary of the claim.

5. Not in this edition

FD-SBL — The Surveillance Bright Line, and the determination under it, are forthcoming. FD-BR defines the Broker role across both the industrial line (FD-BL) and the democratic-safeguards line (FD-SBL); references to FD-SBL in FD-BR are cross-references to that forthcoming instrument and are not satisfied within this edition.

Sector instantiation is not here by design. FD-BL-D1 §7 and FD-BL-D2 §7 are sector-neutral and delegate instantiation — envelope-author qualification, denied-condition behavior, the grade of “independently verifiable,” the corroboration path — to sector annexes. Those annexes are separate instruments and are not part of this family.

6. How to cite

Cite the **concept DOI** for the definitions as they currently stand; cite the **version DOI** to pin this edition. Within a citation, name the instrument and section: *FD-BL §4.2, in FD — Foundational Definitions, August 2026 Edition*. The instrument’s own version number is printed on its cover and in its citation block.

7. Revision policy

Instruments revise on their own schedules and carry their own version numbers. A change to any instrument produces a new edition, dated, published as a new version under the same concept DOI. The edition therefore records which combination of versions was coherent together, which is the property that a corpus built on propagation-by-reference most needs and most easily loses.
